Sprint 1: What to work on

CS/IT 490 WD, Fall 2013

Breakdown

- Sprint Information

- Concepts covered this sprint

- Things to work on

Sprint Information

- Sprint 1 ends on 2013-09-10 (Tuesday)

- Showcase is due on 2013-09-10 (Tuesday)

- Postmortem is due the following Friday, 2013-09-13

- Sprint 2 Plan is due the following Monday, 2013-09-16

Concepts covered this sprint

- This sprint we should plan on covering:
    - HTML Basics
    - CSS Basics

Things to work on

- Page Mockups
  - Once we've covered HTML and CSS, your team should be able to begin working on page mockups.
  - These mockups will be modified later with PHP to make the content dynamic.

Things to work on

If you're working on a blog, for example, try to mockup pages like:

- Front / Welcome Page

- Sign-In Page / Register Page

- User Control Panel

    - New Post

    - Edit Post

- Public blog view

- Blog archive view for date ####-##-##
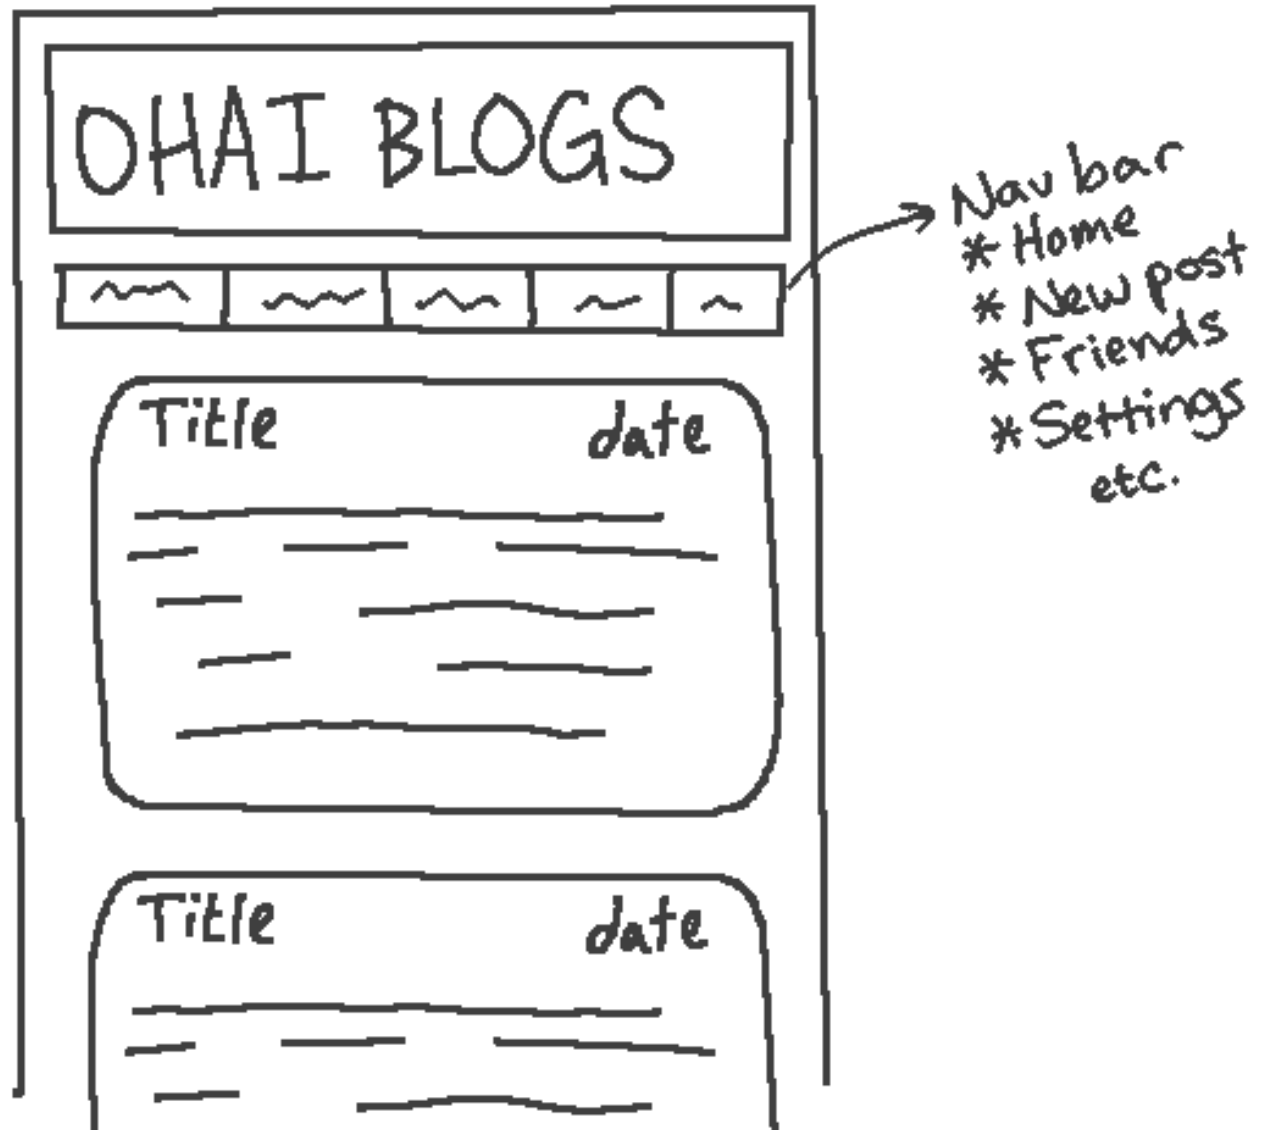

Things to work on

- Work should be split up, everyone should work on certain pages' HTML and CSS.

    - Tommy will work on the User Control Panel / Settings pages

    - Lisa will work on the public blog views (single post, all posts, archive for certain dates)

    - Denny will work on the Front Page and tutorial pages

Things to work on

- Figure out what kind of layout you want for various pages (I tend to sketch this on paper) and try to implement it in HTML & CSS.

- Remember that HTML will have the page's content, and divide regions of the page, but CSS is used to actually position elements and style things.

Misc

- Also think about pages like "Privacy Policy" if you're ever collecting data from the user.

- Look at other webpages – what do they have in their footers? About? Help & Support? Contact Us? Features? Social Media Links?
